

Is Your Life Worth 5G? Brisbane protests against 5g roll out

BRISBANE STOP 5G RALLY: Saturday the 22nd of June, 15 George St, Brisbane starting at 1.30pm. Rally with speakers and information, you can register your interest at <https://www.facebook.com/events/454428418687949/>

Paul Seils, coordinator of the 5G Health Symposium Global aims to prevent our community experiencing the massive health implications that can occur by being exposed to 5G waves. "We want to protect the health of our communities and environment," exclaimed Paul. "If the 5G installation goes ahead as planned, the environment, animals and people will be exposed from 50 – 100 times the radiation we are currently experiencing.

"We are committed to raising community awareness about the implications of 5G technologies and the impact it will have on us all." Health impacts are being ignored! With media attention focusing on faster internet and the supposed benefit of this new technology, the only negative being highlighted is security issues. The potential health and environmental impacts are being ignored. The deployment of 5G constitutes an experiment on humanity and the environment that is defined as "a crime under international law."

More than 100,000 signatories from at least 187 countries have signed the 5G Space Appeal petition opposing the roll out of 5G technology, as of this month. These include scientists, doctors, environmental organisations and citizens. There is widespread concern and a whole body of peer-reviewed studies that show there is a real and imminent threat to the future of our children and environment. There has been no public consultation.

According to global experts, here are some of the health effects of our existing EMR (Electro Magnetic Radiation): Cancer, sterility, miscarriage, learning, brain functionality and general well-being. Symptoms can also manifest as headaches, nose bleeds and skin rashes. The big concern is that our Government advisory body ARPANSA last did testing back in 2002 (17 yrs ago) even before 4G and certainly doesn't cover the massively stronger 5G technology.

Recently ARPANSA put a disclaimer on their site that says their information should only be used as a guide for education purposes. That you should seek professional advice (ie. a doctor or scientist). ARPANSA has recommended levels that are significantly higher than other countries.

"Transmitters will be installed on street lights, in our houses and approximately every 100 meters in our neighbourhood. 5G requires many more towers than our current technology." stated Paul. "It's important that the community know the potential risks. The 5g HealthSymposium Global on Sunday the 7th of July, <https://www.facebook.com/groups/STOP5GGlobal/> starting at 10am, finishing at 5pm, Mount Gravatt will educate, inform and set actions around 5G."

"When you think about it, do we really need our fridge to talk to our toaster? Is the convenience of having a movie download in 30 seconds worth the health and financial costs we are expected to pay?"

We all have a window of opportunity to follow Barrister and Legal Activist Ray Broomhill who recently stopped more than 120 towers being erected in NSW. Contact your local council, speak to others about your concerns, attend rallies and community events. Let's stop 5G in its tracks before it's established in our communities to the detriment of all.
